**Construction**
TBD

Project Description

The project consists of a 5.5 mile, 30” potable water transmission main and improvements to an existing pump station. The County’s transmission main will begin just south of Clark Road (SR72), near Cow Pen Slough, where it will interconnect with a future 48” potable water transmission main from the Peace River Manasota Regional Water Supply Authority (PRMRWSA). The water main will extend west along Clark Road and Hawkins Road, north on Dove Avenue and northwest and west along Proctor Road to Pump Station No. 5, located just west of I-75.

Project Progress/Status

Acquisition of easements continue to be negotiated. The anticipated construction start and completion dates are dependent on property acquisitions. When construction is complete, Proctor Road, within the boundaries of the project, will be resurfaced.

The design is complete for this pipeline addition, and the project was advertised for construction bids in August 2020 bids for construction of the project will be opened on November 7, 2020. Construction is expected to begin in the first quarter of 2021.
