Project Description
The Nokomis Sewer Main project was developed as a result of the Nokomis Revitalization Plan which identified numerous growth and neighborhood improvement initiatives, one of which is to provide central sewer to stimulate growth, redevelopment, and expansion opportunities to businesses along Colonia Lane and the surrounding area.

The Nokomis Sewer Main project consists of two phases. Phase 1 is complete. The forcemain installed as Phase 2 (this project) will connect the existing forcemain on Colonia Lane just west of the Legacy Trail. The new forcemain will extend west along Pocono Trail, turn north along US41 where it will connect to an existing lift station.

Project Progress/Status
The design engineer has submitted the 90% plan set, technical specifications, and additional design documents, which are currently undergoing review by County staff.

A virtual public meeting will be planned for Fall 2020 as the design nears completion. Invitations will be mailed to the residents and businesses in the area once a firm date for the public meeting has been selected.
