Project Description
Through a Request for Professional Services, McKim & Creed, Inc., was selected to provide professional engineering services associated with the Bent Tree Master Lift Station. The firm performed an evaluation of the improvements needed for the master pump station and to convey the maximum flow to the Bee Ridge Water Reclamation Facility. Their evaluation resulted in significant rehabilitation and improvements needed for the master pump station.

This project consists of replacement of the pumps, discharge pipe, wet well deck and hatches, existing valve vault, variable frequency drives, waterline relocation and new generator. Site improvements will include stabilization and resurfacing of the existing asphalt and service road.

Project Progress/Status
The 100% plans have been advertised. Improvements are slated to begin late-November 2020.
