**Project Description**

Through a Request for Professional Services, Atkins, Inc., was selected to provide professional engineering services associated with the Bee Ridge Water Reclamation Facility (WRF). As a purveyor, Sarasota County Public Utilities operates an extensive reclaimed water reuse and storage program for the north county service area. As a result of planned expansions of water reclamation facilities in the north county service area, the Utility has identified the need for a recharge well system for additional water management options during wet weather conditions.

This project consists of a two aquifer recharge wells, one six inch recharge zone monitoring well, one six inch upper zone monitoring well, one recharge pump station, yard piping and instrumentation.

**Project Progress/Status**

Construction began in December 2019 and is scheduled to be complete in October 2021. The contractor has mobilized to the project site and the construction has begun. The project is approximately 40% complete.
