Construction
TBD

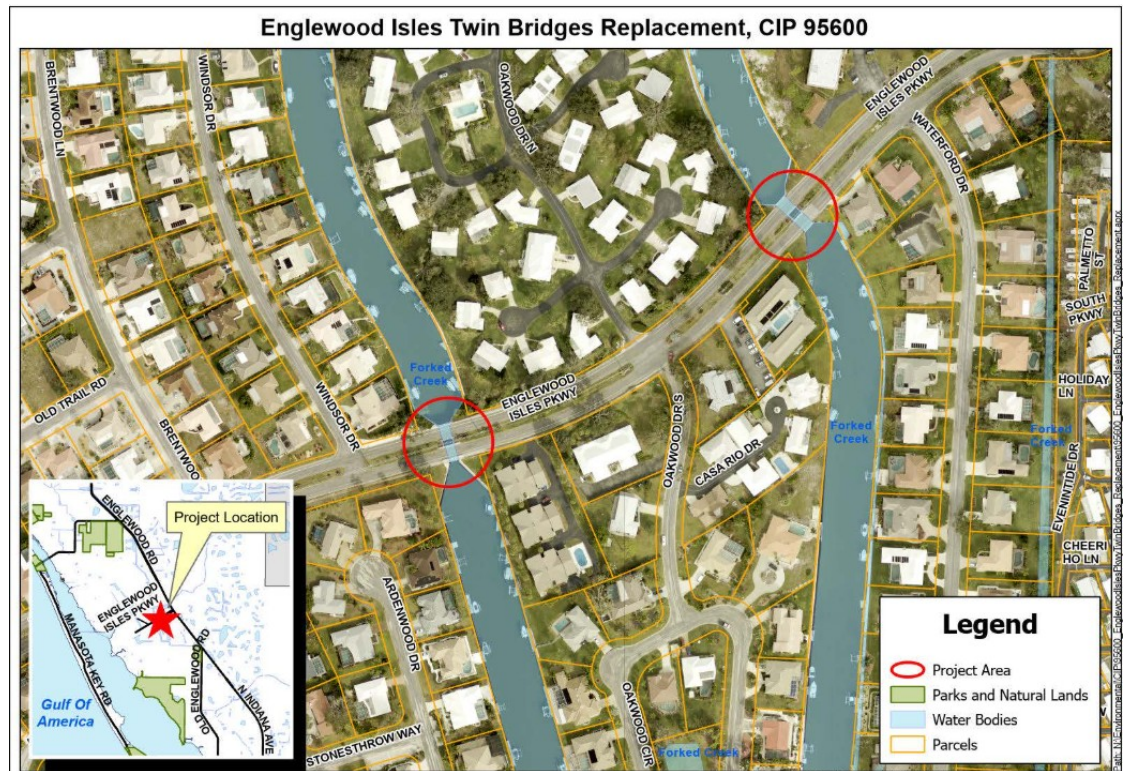

Project Description

The project entails replacing the two existing twin bridges with new bridges. A study will be performed to evaluate increasing the horizontal and vertical clearances underneath the bridges for local residents' boats. Aesthetics will be incorporated into the design to include features such as colors, textured surfaces, decorative railings and median landscaping at the bridge ends. Temporary traffic control will maintain traffic throughout construction. This Capital Improvement Project (CIP) is planned for design only.

Construction is currently not funded in the 5-year CIP.

Project Progress/Status

Estimated target award date is Spring 2026 with design work beginning shortly thereafter.
